Professional Experience

Adobe, Inc.

November 2022 – Present

Senior Software Engineer

- Designed and implemented enhancements to an LLM-driven agent translating user intent to Segment Definition Descriptor (Adobe native DSL for audience authoring), incorporating structured output validation and execution safeguards to ensure deterministic B2B and B2C audience evaluation
- Delivered a dry-run functionality to enable audience evaluation in the data warehouse (max input dataset size 100M+ rows post-table joins) outside the critical path of customer data impressions for use cases like benchmarking and functional testing
- Contributed enhancements and bug fixes to SDD2SQL, a transpiler from SDD to Snowflake SQL

Software Development Engineer

- Designed and developed an entity resolution service to ensure strong consistency of input to B2B audience evaluation (max input dataset size 40M rows)
- Introduced snapshot import, a batch Spark workload that migrates 1+ tenant's person identity graphs (tenant max 500M graphs) from one database cluster to another (multi-tenant database architecture) while ensuring graph consistency in a write-heavy system
- Designed inter-cluster migration feature to perform zero-downtime migration of person identity graphs and incoming traffic across 6 different batch and streaming ingestion pipelines from one destination database cluster to another

C3 AI, Inc.

July 2020 – September 2022

Forward Deployed Software Engineering Manager

- Managed team of 6 software engineers deployed to enterprise customer engagements
- Contributed enhancements to automate MLOps (monitoring, model CI/CD) to C3 AI Reliability (predictive maintenance for large physical systems), in conjunction with data scientists and applications engineers

Software Engineer

- Developed web applications with ML solutions in partnership with large enterprise customer in financial services
- Led team of 6 application developers in design, development, test, and release of various AI use cases, including early warning in commercial lending, automated financial spreading, anti-money laundering detection, and credit worthiness assessment

Oracle, Inc.

July 2019 - July 2020

Application Developer II

- Designed and developed ML solution to facilitate expense management automation in the enterprise using linear and ensemble-based classification techniques to identify expense line items in a report requiring further review
 - Developed explainability module in conjunction with predictive module leveraging LIME technique to drive adoption through enhanced model transparency
-

Education

Stanford University

June 2019

Symbolic Systems, M.S.

University of California, Los Angeles

June 2017

Cognitive Science, B.S. (cum laude, Departmental Honors) – Dean's List, Specialization in Computing

Skills and Certifications

- Programming Languages: Scala, Java, Python
- Frameworks: OpenAI Agents SDK, Scala Akka, Java SpringBoot, Apache Spark
- Technologies: Postgres, MySQL, FoundationDB, CosmosDB, DynamoDB, Apache Kafka, Snowflake, Delta Lake
- Tooling: Kubernetes, Docker, Argo (Workflows, ArgoCD)
